

Kappa Mu Epsilon Mathematics Honor Society

CMU's Very Own, Jonah Branding!

Why?: An Introduction to the Philosophy of Mathematics

What kind of knowledge does math give us? In what sense do mathematical objects like numbers, operators, or sets “exist”? Are mathematical truths “discovered” or “created”? What is the relationship between math and other disciplines like logic or science? These are a few of the questions raised by the philosophy of mathematics: an interdisciplinary field concerned with the nature of mathematics and mathematical knowledge. In this talk, Jonah will give a broad, historically-oriented introduction to the philosophy of mathematics. He will clarify the major issues and sketch some potential solutions.

Pie will be served to celebrate Pi Day! Wear you KME Pi Day t-shirts!
